

## EPA Region 8 Current and Planned Activities in the “Industrial Triangle” Area

Org / Cont act	Activity	Description
EPA Air D- AT / David Cobb	Support of local food advocates	EPA Region 8's Air and Toxics Enforcement Branch plans to conduct an inspection of the Suncor Refinery's compliance with Clean Air Act Section 112(r) chemical Risk Management Plan regulations. The inspection is being conducted jointly with CDPHE's Air Pollution Control Division and is currently scheduled to occur in September 2020.
ARRM / Laura Farris	Support of local food advocates	Working on an ongoing basis with the Community Outreach Service Center in Denver, who is working to provide local food to residents in the Globeville and Elyria-Swansea (GES) and Cole neighborhoods. Helped them complete a community self-assessment and local food action plan to assist with several of their short-term goals. Partners in this work include Groundwork Denver and Focus Points Family Resource Center. Also coordinating the ongoing work of other local food advocates in the area. For example, held a July 31 call with 13 organizations who are working to advance access to local food in the GES neighborhoods and build local food resiliency during the pandemic. Exploring opportunities for funding to support this work. Opportunity Zone (OZ) funds may help the Community Outreach Service Center secure a location for a local food co-op that is in the planning stages. Once a location has been identified, we will assist them in writing an OZ prospectus.
SEM - EPA MCP / David Fronczak	Support of CDPHE PH / Site Assessment program	At the Vasquez Boulevard/I-70 Superfund site, a limited phase II Environmental Site Assessment (ESA) and subsurface investigation had both been completed for chlorinated solvents in the northeast quadrant of the VB/I-70 Operational Unit 1 (OU-1) area, along Brighton Boulevard. CDPHE performed a Pre-CERCLA screening to determine if a Preliminary Assessment (PA) or other further investigation is warranted into the contamination of PCE at the site. The Pre-CERCLA screening recommended additional investigation and sampling be conducted at the site in the form of a PA with limited sampling. This work is on-going.
